DIRECTIONS: HOW TO USE

The FDA advises 4 grams (4000 mg) of acetaminophen as the maximum dosage in a 24-hour period.⁴ Taking more acetaminophen than directed is an overdose and can lead to liver damage.⁵

• Always read and follow the label.
• Take only one medicine at a time that contains acetaminophen.
• Avoid taking drugs containing acetaminophen for more than 10 days in a row.

Now You Know: You may not notice the signs and symptoms of liver damage right away because they take time to appear. Or, you may mistake early symptoms of liver damage (for example, loss of appetite, nausea, and vomiting) for something else, like the flu. Liver damage can develop into liver failure or death in only a few days.⁶
